

### **Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application.

### **Listing of Claims:**

1. (Currently Amended) A bicycle rack intended in use to be supported from a support, the rack comprising a base adapted to be fixed to the support, a support member connected to the base to enable the support member to be pivotable about a first axis which in use is to be is generally level, to be moveable between a first position, at which it is adjacent to the support and a second position at which it extends laterally from the support, the support member being adapted to receive and support ~~an item~~ a portion of the wheel of a bicycle between the edges, when the support member is in its second position.
2. (Currently Amended) A bicycle rack as claimed at claim 1 wherein the support member is ~~pivotable from the base about a generally upright axis~~ provided with a slot shaped first space between the inner edge and the outer edge, wherein the first space is configured to receive the portion of the wheel.
3. (Currently Amended) A bicycle rack as claimed at claim 1 ~~3~~ wherein the ~~support member is provided along at least a portion of its length with a~~ outer edge of the support member defines the outer end of the first space adapted to receive a portion of the item.
4. (Currently Amended) A rack as claimed at claim 3 wherein the outer end of the first space is closed ~~configured in the form of a slot.~~
5. (Currently Amended) A bicycle rack as claimed at claim 3 ~~4~~ wherein the outer edge of the support member defines the closed outer end of the first space is closed and the outer edge provides a guide and support surface for the wheel on its movement into and out of the first space.
6. (Currently Amended) A bicycle rack as claimed in at claim 3 ~~5~~ wherein ~~the outer end of the support member is provided with an edge which is adapted to extend across the outer end of the first space to provide a guide surface~~ the upper surface of the outer edge has a concave profile.

7. (Currently Amended) A bicycle rack as claimed at claim 5 ~~3~~ wherein ~~the edge is defined by a first transverse member across the outer end of the first space~~ the inner end of the first space is defined by a transverse surface.

8. (Currently Amended) A bicycle rack as claimed at claim 6 ~~7~~ wherein ~~the edge has an upwardly directed concave profile~~ transverse surface is provided by a cross member extending across the inner end of the first space.

9. (Currently Amended) A bicycle rack as claimed ~~in claim 3~~ at claim 1 wherein, ~~the support includes a transverse surface which defines the inner end of the first space~~ the rack further comprises a brace member, the brace member being pivotally supported from the base for pivotable movement about a second axis, the first and second axes being parallel and spaced from each other, the brace member being moveable with the support member such that, when the support member is in its second position, the brace member provides support to the support member.

10. (Currently Amended) A bicycle rack as claimed at claim 9 wherein ~~the transverse surface is provided by a cross member extending across the inner end of the first space~~ the support member and brace member are interengaged outward of their pivotable mountings such that movement of the support member causes the pivotable movement of the brace member.

11. (Currently Amended) A bicycle rack as claimed ~~in claim 1~~ wherein, at claim 9 wherein ~~the rack further comprises a brace member, the brace member being pivotally supported from the base for pivotable movement about a second axis, the first and second axes being parallel and spaced from each other, the brace member being moveable with the support member such that, when the support member is in its second position, the brace member provides support to the support member~~ the brace member is provided with a second space which cooperates with the first space defined by the support member to provide a combined space which is configured to receive the portion of the wheel, wherein the second space provides an upright extent to the combined space while the first space provides a lateral extent to the combined space.

12. (Currently Amended) A bicycle rack as claimed at claim ~~11~~ 1 wherein ~~the support member and brace member are interengaged outward of their pivotable mountings such that movement of the support member causes movement of the brace member~~ rack further includes a storage

shelf supported from a side of the support member to extend transversely outward from the support member.

13. (Currently Amended) A bicycle rack as claimed at claim 10 ~~1~~ wherein the ~~brace member is provided with a second space which cooperates with the space defined by the support member to provide a combined space wherein the second space provides an upright extent to the combined space while the first space provides a lateral extent to the combined space~~ support member is pivotable from the base about a generally upright axis.

14. (Currently Amended) A bicycle rack as ~~claimed in claim 1~~ wherein the rack further includes a storage shelf adapted to receive and store further items, the storage shelf being supported from a side of the support member to extend transversely outward from the support member supported from an upstanding support, the rack comprising a base fixed to the support, a support member having an outer and an inner edge, the inner edge of the support member connected to the base to enable the support member to be pivotable about a first axis which is generally level, to be moveable between a first position, at which it is adjacent to the support and a second position at which it extends laterally from the support, the support member being adapted to receive and support a portion of the wheel of a bicycle between the edges when the support member is in its second position.

15. (Currently Amended) A bicycle rack as ~~claimed in claim 1~~ at claim 14 wherein the rack is adapted to support the wheel of a bicycle within the space defined by the support member is provided with a first space which is adapted to receive the portion of the wheel between the inner edge and the outer edge.

16. (Currently Amended) A bicycle rack supported from an upstanding support, the rack comprising a base fixed to the support, a support member connected to the base to be pivotable about a first axis which is generally level, to be moveable between a first position, at which it is adjacent to the support and a second position at which it extends laterally from the support, the support member being adapted to receive and support an item when in its second position as claimed at claim 15 wherein the outer edge of the support member defines the outer end of the first space.

17. (Currently Amended) A bicycle rack as claimed at claim ~~1~~ 16 wherein the ~~support member~~ is pivotable from the base about a generally upright axis outer end of the first space is closed.

18. (Currently Amended) A bicycle rack as claimed at claim ~~16~~ 1 wherein the outer edge of the support member is provided along at least a portion of its length with a first space adapted to receive a portion of the item defines the closed outer end of the first space and the outer edge provides a guide and support surface for the wheel on its movement into and out of the first space.

19. (Currently Amended) A bicycle rack as claimed at claim ~~17~~ 18 wherein the ~~first space is configured in the form of a slot~~ upper surface of the outer edge has a concave profile.

20. (Currently Amended) A bicycle rack as claimed at claim ~~17~~ 15 wherein the ~~outer~~ inner end of the first space is ~~closed~~ defined by a transverse surface.

21. (Currently Amended) A bicycle rack as claimed ~~in claim 17~~ at claim 20 wherein the ~~outer end of the support member is provided with an edge which is adapted to extend across the outer end of the first space to provide a guide surface~~ transverse surface is provided by a cross member extending across the inner end of the first space.

22. (Currently Amended) A bicycle rack as claimed at claim ~~21~~ 14 wherein ~~the edge is defined by a first transverse member across the outer end of the first space~~ the rack further comprises a brace member, the brace member being pivotally supported from the base for pivotable movement about a second axis, the first and second axes being parallel and spaced from each other, the brace member being moveable with the support member such that, when the support member is in its second position, the brace member provides support to the support member.

23. (Currently Amended) A bicycle rack as claimed at claim ~~21~~ 22 wherein ~~the edge has an upwardly directed concave profile~~ support member and brace member are interengaged outward of their pivotable mountings such that movement of the support member causes movement of the brace member.

24. (Currently Amended) A bicycle rack as claimed ~~at any one of claims 18~~ at claim 22 wherein, the ~~support includes a transverse surface which defines the inner end of the first space~~ brace member is provided with a second space which cooperates with the first space defined by

the support member to provide a combined space wherein the second space provides and upright extent to the combined space while the first space provides a lateral extent to the combined space.

25. (Currently Amended) A bicycle rack as claimed at claim 24 14 wherein the ~~transverse surface is provided by a cross member extending across the inner end of the first space~~ the rack further includes storage shelf supported from a side of the support member to extend transversely outwardly from the support member.

26. (Currently Amended) A bicycle rack as claimed ~~in claim 16~~ at claim 14 wherein, ~~the rack further comprises a brace member, the brace member being pivotally supported from the base for pivotable movement about a second axis, the first and second axes being parallel and spaced from each other, the brace member being moveable with the support member such that, when the support member is in its second position, the brace member provides support to the support member~~ the support member is pivotable from the base about a generally upright axis.

27. - 31. (Cancelled)
